rather than "turn the red button green."
Based on a Memorandum of Understanding (MOU) with Bundesbank, the PBOC authorizes its Frankfurt Branch to serve as the RMB clearing bank in 2012-2014.

For China to create a global currency, it needed to create the relationships and clearing mechanisms to support global liquidity for the RMB. Investors needed confidence in the RMB as an instrument of international trade and investment. However, the U.S. response to other nations' calls for new global currency arrangements as a result of the financial crisis and bailouts was to extend its powers to enforce the dollar system. Supported by its economic and military clout, this included expanding legal powers based on a variety of justifications related to financial crises and disaster capitalism.

The problem was, the U.S. consumer kept buying, U.S. multinationals kept outsourcing to China and competing to win Chinese sales, and Wall Street kept growing leverage on global markets. China's need to be globally currency would mean it would have to compete with the dollar for global liquidity, and this was not going to happen without the U.S. being able to enforce the dollar system. As I regularly recommend our Solari Report titled "Seeking U.S.-China Balance" with Stephen Roach, author of "The Rise of China and America's False Prosperity," the endgame was that the U.S. could not be allowed to maintain its dominance over the global economy.

The U.S. superpower has most of the cards in the global economic deck, but that is not a position that a single superpower can hold forever. The rise of China would mean a new player on the global economic stage, and this could not continue without the U.S. being able to enforce the dollar system. Supported by its economic and military clout, this included expanding legal powers based on a variety of justifications related to financial crises and disaster capitalism.

Therefore, the U.S. response was to "de-dollarize" reassert global currency liquidity. Supported by its economic and military clout, this included expanding legal powers based on a variety of justifications related to financial crises and disaster capitalism.

By the end of 2019, however, the dollar and the global financial system were in trouble. The dollar was weakening, and the global financial system was in danger of collapsing. The dollar was weakening, and the global financial system was in danger of collapsing.

Theoretically, any one of them could replace the dollar as the world's currency, but they won't because they aren't as widely traded. The U.S. superpower has most of the cards in the global economic deck, but that is not a position that a single superpower can hold forever.
Denmark-based tech company BiChip cancels launch of microchip implant readable from a distance and connected to the Internet in the face of protests by Christian activists. BiChip has contracts to produce the microchip implants for the Danish government and U.S. Navy. A 2018 update to the political weapon, imposing restrictions. Many countries are now turning away from the dollar as a reserve currency. The U.S. dollar will collapse soon.

One of the reasons for the adoption of 5G—originally created by the Israelis for crowd control—is to ensure the surveillance and management of a combined human and non-human population. It is designed to be successful at introducing transhumanism and prototyping the integration of digital technology into humans. Much of the dystopian legal and regulatory mechanisms are in place to engineer and falsify epidemics and pandemics for decades. This is not a new phenomenon—Covid-19 is simply the cover story for the larger agenda.

The world's most valuable resource is no longer oil, but data. Google, Facebook, and other social media companies are now worth more than many governments. The Chinese government, for example, has stated that it needs to control the global Internet to protect its national security interests. The Chinese government has already started to build its own social credit system, which will rank citizens based on their behavior online and offline. The Chinese government has also been using data from social media platforms to monitor and control its citizens. This is a clear example of how data is being used to control people and influence their behavior.

The half has never been told. The Chinese government is using data to control its citizens and influence their behavior. The Chinese government has already started to build its own social credit system, which will rank citizens based on their behavior online and offline. The Chinese government has also been using data from social media platforms to monitor and control its citizens. This is a clear example of how data is being used to control people and influence their behavior.

The institution of a high-tech version of the "whipping machine" creates the potential for slavery to generate extraordinary profits. This is a clear example of how technology can be used to control people and influence their behavior. The Chinese government is using data to control its citizens and influence their behavior. The Chinese government has already started to build its own social credit system, which will rank citizens based on their behavior online and offline. The Chinese government has also been using data from social media platforms to monitor and control its citizens. This is a clear example of how data is being used to control people and influence their behavior.

The sucking of profits from the global economy has generated extraordinary opportunities for those who control the data. This is a clear example of how technology can be used to control people and influence their behavior. The Chinese government is using data to control its citizens and influence their behavior. The Chinese government has already started to build its own social credit system, which will rank citizens based on their behavior online and offline. The Chinese government has also been using data from social media platforms to monitor and control its citizens. This is a clear example of how data is being used to control people and influence their behavior.

If you can start a local currency system now, I highly suggest you do so. Pray that the central bankers fail in their efforts to control the global economy. The Chinese government is using data to control its citizens and influence their behavior. The Chinese government has already started to build its own social credit system, which will rank citizens based on their behavior online and offline. The Chinese government has also been using data from social media platforms to monitor and control its citizens. This is a clear example of how data is being used to control people and influence their behavior.

The U.S. and Leadership in Space

The Chinese government is moving into space to secure our future. China's ability to support global RMB liquidity and to work with the BRICS nations to create alternatives to dollar trading and payment systems were not just a coincidence. The Chinese government is using data to control its citizens and influence their behavior. The Chinese government has already started to build its own social credit system, which will rank citizens based on their behavior online and offline. The Chinese government has also been using data from social media platforms to monitor and control its citizens. This is a clear example of how data is being used to control people and influence their behavior.

Now, however, the U.S. is leading, but we're not leading by enough. But very shortly, we'll be leading by a lot. The Space Force will help us deter aggression and control the ultimate weapon in outer space.
We are introducing such a large number of new technologies and legal, regulatory, and enforcement changes all at once that many people will go wrong. We are embarking on a process this chaotic, a lot can go wrong.

Our planet has become a large invention room, proceeding with a global experiment marked by trial and error and marketed with massive disinformation and media antics, a lot can go wrong. We should go on living. You will never guess what the last drop will be like. The crisis strikes later than we expect it and before we are prepared for it, the hard times again and to su...

Crypto is phenomenally energy-expensive. This is one of the reasons I get to laughing over climate change. If we need to stop using so much fossil fuel and coal and natural gas and oil, then why are we building new oil and gas refineries? Why are we building nuclear power plants? Why are we burning coal in power plants again? Why are the automakers building more gas guzzling cars and SUVs? We are building more than we need to.

People think it's very esoteric to talk about disruption in the space-time wave. But setting up certain psyops is very much about that. The theory of these operations has been around for a long time, the military has been working on it for decades. They are looking for ways to manipulate and manipulate information, ways to influence people's beliefs and actions, ways to control people's minds.

A new study has found that people who believe in conspiracy theories are more likely to engage in risky behaviors, such as smoking and drinking, and are less likely to follow public health guidelines, such as wearing masks and getting vaccinated. The study also found that people who believe in conspiracy theories are more likely to be resistant to change and less likely to be open to new ideas. This is a problem because it means that people who believe in conspiracy theories are less likely to take action to protect themselves and others from serious threats.

Beyond government, debt entrapment also extends to millions of small businesses and farmers around the world, as well as millions of churches and cultural, educational, and social organizations. Governments, whether national or local, can also use debt to control people and organizations, by threatening to close them down if they do not pay their debts. This is a serious problem because it means that people and organizations have no choice but to accept the debt and pay it, even if it means going out of business.

The Fed knows where every penny is. All the wires are batched and run through the New York Fed. Move to a 100% digital system, and it seems that we are moving towards a state of central control. But what will happen when the central bank can control all the money in the world? What will happen when the central bank can control the entire global economy?

When legal and tax affairs go well, it appears easy. But when they go wrong, the knot of legal and tax matters can become a dense knot. This is true for individuals, businesses, and governments. When legal and tax affairs go well, it appears easy. But when they go wrong, the knot of legal and tax matters can become a dense knot. This is true for individuals, businesses, and governments.

The Red Button. You never want to have an analogy in the middle of a speech, but I did. In the summer of 2000, I spoke to a wonderful group of people called Spiritual Frontiers Foundation International. They have a conference once a year to talk about how they can help evolve our society spiritually. They are very dedicated, wonderful people.

A friend asked me to give a speech called "The Money Wars on Organized Crime." In the middle of the speech, I described the fact that a reporter I was doing research for had been told by the Department of Justice that the US economy and the financial system laundered $500 billion to $1 trillion a year of all dirty money.

So I said to this wonderful group of spiritually evolved people, "What would happen if we stopped laundering $500 billion to $1 trillion a year of all dirty money?"

We had a little interaction, and they said, "Well, the stock market would go down because that money would leave and go to Hong Kong or Singapore or Zurich, and we would have trouble financing the government deficit because we would offer the people who control that money and the accumulated capital for years thereafter. Our government checks might stop, or our taxes might go up."

So I said, "Okay. Well, let's pretend that there is a big red button up here on the lectern, and if you push that button, you can stop all hard narcotics trafficking in your community, your state, and your country tomorrow, thus affecting the people who control $500 billion to $1 trillion of annual dirty money. Who here will push the button?"

Out of 100 people, only one would push the button. I said to the other 99, "Why would you not push the button?"

They said, "We don't want our mutual funds and our 401ks to go down in price, we don't want our government checks to stop, and we don't want our taxes to go up."

So that is what I call "The Red Button problem." The Solari mission is about how do we turn the red button green. In other words, how do we make money pushing the red button because if we can make money pushing the red button, then we can push the red button?

Welcome to 2020. Mr. Global has pushed the Red Button. Now, can you and I turn it green?

Endnotes:

2. From Paul Farmer, February 2019: "Models projecting the spread rapidly worldwide. Today, it is estimated that more than 5 billion people have mobile devices, and many of those connections are smartphones. But the growth in mobile technology does not have as much impact on other nations as it does in the US. While the information for other nations is emerging rapidly, for example, in the middle east where and mobile phones are more prevalent compared to a nation in Latin America which may not have as much internet penetration."

3. From Pew Research, February 2019: "Mobile technology has spread rapidly around the globe. Today, it is estimated that more than 5 billion people have mobile devices, and over half of those connections are smartphones. But the growth in mobile technology does not have as much impact on other nations as it does in the US. "
